Objective

My objective is to secure a position where I can contribute a whole of myself to the Organisations growth which ultimately will enhance my learnings, skills and expand my knowledge, and help the organization accomplish its ambitions.

Projects

- House-Renter | Engineered a house rental platform designed to provide a seamless experience for new city movers and house owners to securely list and find properties.

  -Developed the frontend using HTML and CSS with EJS (Embedded JavaScript) for dynamic content rendering.

  -Implemented a Model-View-Controller (MVC) architecture, separating the application logic for improved scalability and maintainability.

  -Constructed backend with Node.js and Express.js to handle user authentication and property management operations.

  -Utilized MongoDB as the database to store property and user data, including secure hashing of passwords with bcrypt for enhanced security.

  -Project link-"**Github**"

- E-Commerce Website |Developed a fully functional E-Commerce website to provide a seamless shopping experience for users, featuring a product catalog, a shopping cart, and secure checkout.

  -Designed and built the user-facing interface from scratch using HTML5 and CSS3 for a modern and responsive layout.

  -Implemented interactive features and client-side logic using JavaScript, including dynamic product filtering, a functional shopping cart, and form validation.

  -Project link-"**Github**" .

- Ancient Theft Game | Created a open world story based game ,used unreal engine tools to create the game environment ,blender for character designs , and Implemented the mechanics ,animations and arts for the game in visual studio through c++ and blueprints.
